Visco mattresses, also known as memory foam, is a man-made product that can be shaped according to body temperature and weight. The main component of this elastic product is oil and different varieties of chemicals. It is first developed by NASA for astronauts to be able to stand against with high pressure. After a few time its developed by bed producers and a new mature kind is popped up. Visco mattress can absorb more pressure and provides a better quality of support than the of bed mattress because it is more dense.

A white, classic twin-bell alarm clock with a silver-colored metal frame and feet. The clock face is white with black numbers and hands. The time shown is approximately 10:10. The clock is positioned on a light-colored wooden surface.

#### THE IDEAL REST

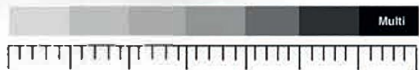

Sleeping is important but rest while you are sleeping is not always easy. Recovering physical and mental energies by eliminating any weariness improves life and, from this point of view, there are many key factors that must be considered when choosing a mattress: hypoallergenic products that significantly reduce the proliferation of bacteria, mites and molds; the comfort linked to the right distribution of resistance to the weight of the body, which varies depending on the points of contact with the mattress and ensures adequate differentiated support; removable mattress cover for accurate and effective hygiene.

A young girl with blonde hair tied up in a bun is lying on a bed with white bedding. She is smiling broadly and hugging a large, light brown teddy bear. The background is softly blurred, showing a window with light coming through.

Mattress fabric, produced using tencel modal fibres, integrates with nature's cycle and helps maintain environmental balance. The fibrils are made from renewable tree raw material formed by photosynthesis in an environmentally friendly production process is used. Since the fibres are biodegradable and soluble, they can be completely returned to nature. Tencel fiber is certified and obtained from beech tree sources in Australian forests. Provides natural comfort during sleep. It helps to increase your sleep quality with its high strength, superior moisture management and softness.

High activity antiviral particles are used in the structure of the mattress fabric. The particles used inactivate the viruses on the surface of the fabric. Its basic working principle is to prevent the spread, proliferation and presence in the environment by disrupting the structure of the cell membranes that viruses use as a shell. Anti-v bedding fabric is produced to reduce the contamination caused by viruses while you are asleep and to offer you a more hygienic environment. Anti-v bedding fabric has been tested according to international ISO 18184 antiviral test standards and 94 percent positive results have been obtained against viruses.
