SIFIR PÜRÜZ YÜZEY

Avrupa'da bir ilk olan Sıfır Pürüz Yüzey teknolojisi, sırlı porselenlerin kir ile temas eden yüzeylerindeki istenmeyen lekeleri ve kireçlenmeleri en aza indirmek için geliştirilmiştir. Yıllar süren Ar-Ge çalışmalarıyla yaratılan Sıfır Pürüz Yüzey teknolojisi, normal sırlı porselen yüzeyden 19 kat daha pürüzsüzdür, hijyen ve kir tutma konusunda normal sırlı porselen yüzeye göre tartışmasız üstünlük sağlamaktadır.

SUPER SMOOTH SURFACE

Super Smooth Surface technology was developed by **FARAMA** to minimize unwanted stains and lime formation on the surfaces of glazed porcelains that contact with dirt for. Created through years of R&D work, Super Smooth surface is 19 times smoother than normal glazed porcelain surface. Super smooth surface technology is absolutely superior to normal glazed porcelain surface in terms of hygiene and dirt formation.

SUPERFICI EXTRA LISCE

Prima in Europa, la Superficie Super Smooth, con la sua Tecnologia antiporosità, è stata sviluppata per diminuire al minimo le macchie indesiderate e le macchie di calcare sulle superfici smaltate in porcellana che vengono a contatto con lo sporco. Questa particolare superficie extra liscia, realizzata dopo anni di ricerche presso il dipartimento R&S, presenta una porosità inferiore di 19 volte rispetto alla normale ceramica smaltata. La tecnologia extra liscia, presenta una superiorità ineguagliata rispetto alle superfici in porcellana classiche per quanto riguarda l'igiene e la resistenza allo sporco.

CLEAN PLUS+

“İLK GÜNKÜ GİBİ PARLAK”

FARAMA yeni uygulaması Clean Plus+ teknolojisi sayesinde lavabo ve klozetleriniz ilk günkü parlak görüntüsünü çok daha uzun süre koruyor. Clean Plus yüzey kaplama teknolojisi ile seramik yüzeylerin pürüzlülüğü bir kat daha azalırken, sıvıların yüzey geriliminin artması sağlanıyor.

Bu sayede hidrofobik hale gelen yüzey lekelenmeleri, kirlerin yapışmasını ve kireçlenmeleri engelliyor. Daha az kirlenen, güçlü temizlik maddeleri gerektirmeden çok kolay temizlenebilen banyo ürünlerinizin üstünden yumuşak bir bezle geçmek ilk günkü parlaklıklarını korumak için yeterli oluyor.

CLEAN PLUS+

“SPARKLE JUST LIKE THE FIRST DAY”

Washbasin and toilets maintain their bright state of the first day for a much longer period thanks to the Clean Plus+ technology, the innovation of **FARAMA** R&D family. Clean Plus surface coating technology makes ceramic surfaces twice as smooth while increasing surface tension of liquids.

This way, it prevents hydrophobic surface stains, adhesion of dirt and lime formation. Your bathroom products get less dirty and it's very easy to clean them without using strong cleaning agents. Rubbing with a soft cloth is enough to maintain their first day brightness.

CLEAN PLUS+

“BRILANTE COME IL PRIMO GIORNO”

Grazie alla tecnologia, ideata dal dipartimento R&S della società **FARAMA**, i vostri lavabi e i vostri WC manterranno la brillantezza del primo giorno. Con la tecnologia di rivestimento Clean Plus+, le superfici in ceramica hanno una minore porosità, garantendo l'aumento della tensione superficiale del liquido. Grazie a questo, le macchie sulla superficie divengono idrofobiche e viene ostacolata la persistenza dello sporco e del calcare.

Il vostro bagno si sporcherà di meno e non saranno necessari prodotti di pulizia aggressivi; dovrete semplicemente passare un panno morbido sulla superficie da pulire per proteggere la brillantezza del primo giorno.

ÇEVRE DOSTU KLOZETLER

JET FLUSH

DAHA HİJYENİK: FARAMA Jet Flush özellikli klozetlerde, hazne yıkama suyu ile sifon yıkama suyu ayrı kanallardan giriş yapar. Bu sayede klozetin temizliğinde bütün alanlar %100 yıkanır ve maksimum düzeyde hijyen sağlanır.

DAHA SESSİZ: Jet Flush klozetlerde hazne yıkama ve sifon yıkama suyu farklı kanallar kullanarak temizlenmesi gereken bölgeye en yakın noktalardan giriş yapar. Ayrıca hazne yıkama suyunun tek yönden ve dönerek gelmesi, suyun çarpışmasından kaynaklanan su sesini önler. Bu özellikleri sayesinde Jet Flush özellikli klozetler, normal klozetlere göre daha sessiz yıkama yapar.

DAHA GÜÇLÜ FONKSİYON: Jet Flush özellikli klozetlerde bulunan "jet akış sistemi" sayesinde ayrı kanallardan gelen hazne ve sifon yıkama suyu yıkama bölgesinin en yakın ve etkin noktalarından giriş yapar. Ayrıca aynı yönde dönerek yıkama yapan hazne yıkama suyu, normal klozetlerde olduğu gibi, birbirine çarparak hız kesmez. Böylelikle Jet Flush özellikli klozetin diğer klozetlere göre daha güçlü yıkama yapması sağlanır.

JET FLUSH

MORE HYGIENIC: In FARAMA Jet Flush toilets, bowl cleaning water and siphon cleaning water are supplied through separate channels. Thus, all areas of the toilet are washed 100%, ensuring maximum hygiene.

MORE SILENT: In FARAMA Jet Flush toilets, bowl cleaning water and siphon cleaning water are supplied from the closest points to the flushing area by using separate channels. Moreover, the bowl cleaning water comes from a single direction by rotating, which prevents the water sound caused by the collision of water bodies. Thanks to these features, FARAMA Jet Flush toilets flush more silently than standard toilets.

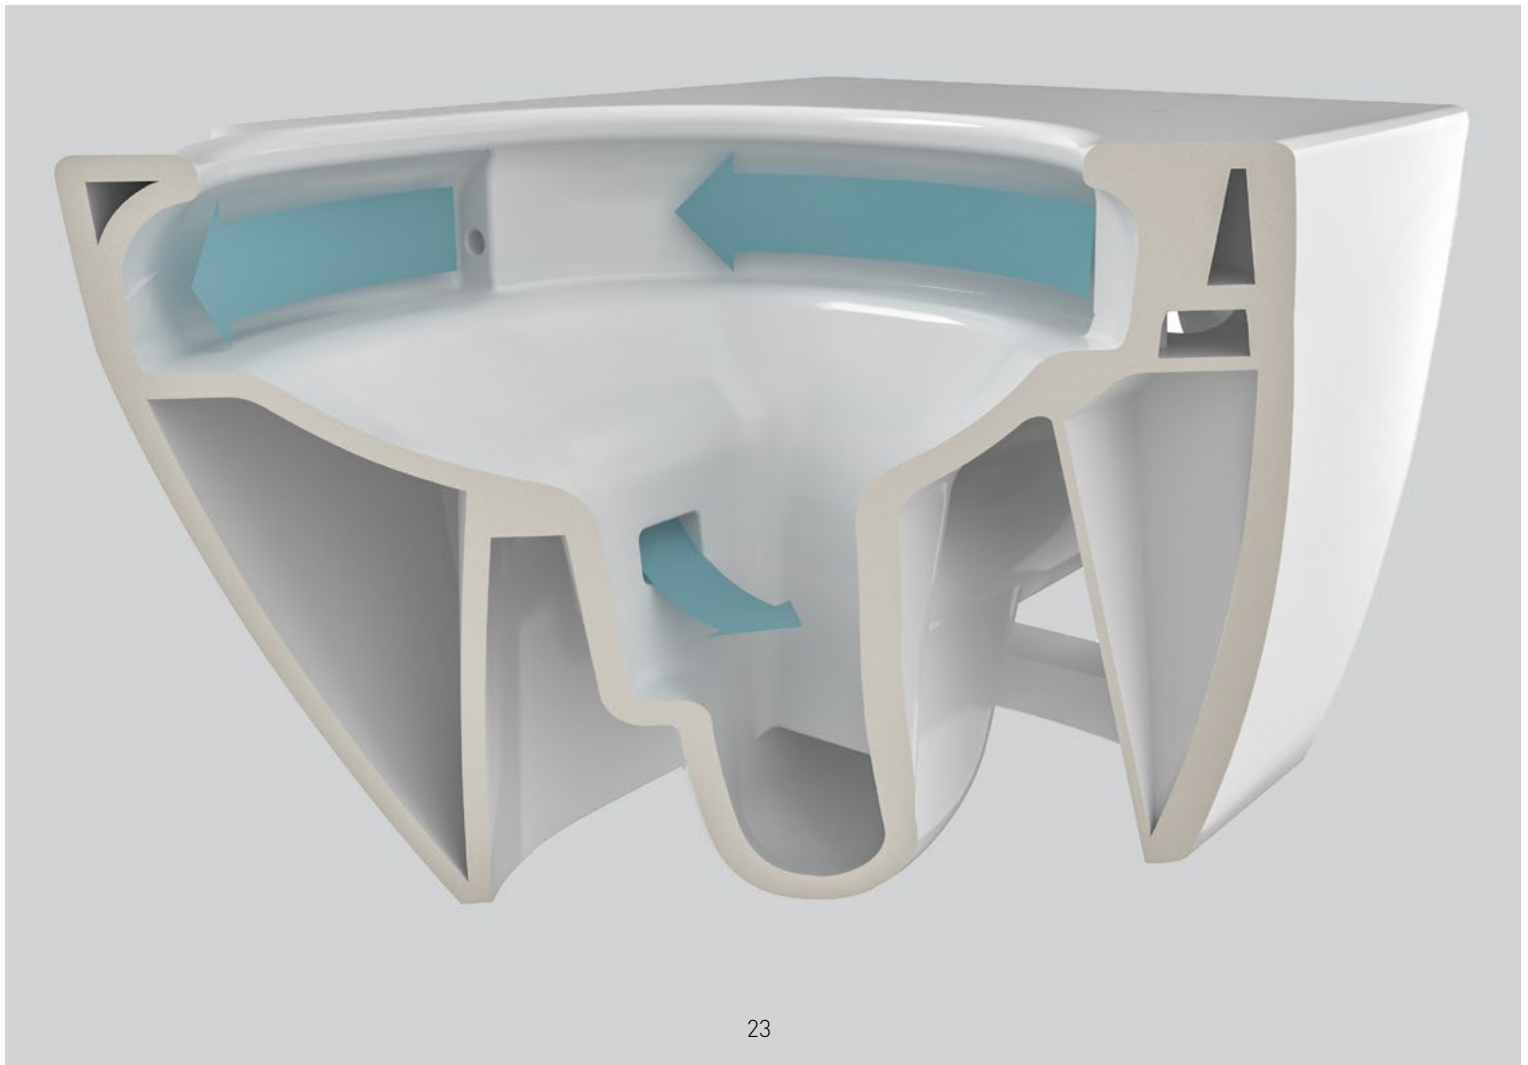

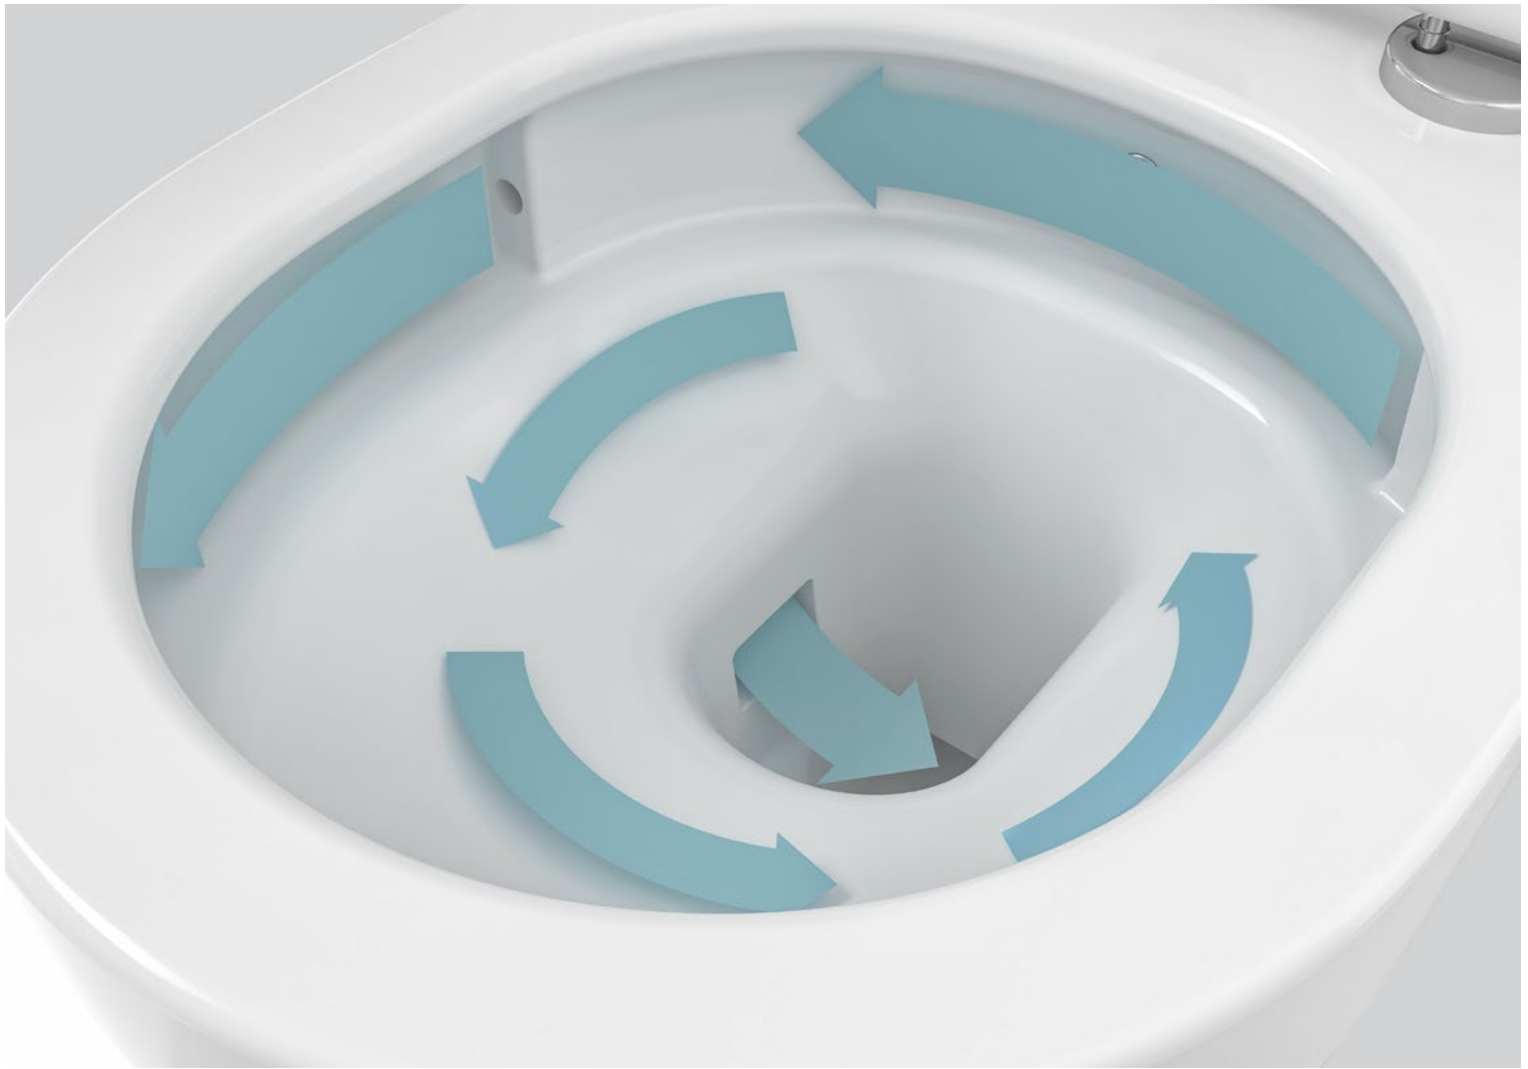

STRONGER FUNCTION: Thanks to the "jet flush system" in the FARAMA Jet Flush toilets, bowl cleaning water and siphon cleaning water come through separate channels and enter from the closest and most effective points of the flushing area. Moreover, the bowl cleaning water, which flushes by rotating in the same direction, does not slow down by colliding with other water bodies, as in standard toilets. Thus, Jet Flush toilets flush more strongly compared to other toilets.

JET FLUSH

PIU' IGIENICO: Nelle toilette FARAMA Jet Flush, l'acqua per la pulizia della tazza e l'acqua per la pulizia del sifone vengono erogate attraverso canali separati. In questo modo, tutte le aree della toilette vengono lavate al 100%, garantendo la massima igiene.

PIU' SILENZIOSO: Nelle toilette FARAMA Jet Flush, l'acqua per la pulizia della tazza e l'acqua per la pulizia del sifone vengono erogate dai punti più vicini all'area di scarico utilizzando canali separati. Inoltre, l'acqua per la pulizia del vaso proviene da un'unica direzione mediante rotazione, il che evita il rumore dell'acqua causato dalla collisione delle masse d'acqua. Grazie a queste caratteristiche, i bagni FARAMA Jet Flush sciacquano in modo più silenzioso rispetto ai bagni standard.

FUNZIONE PIU' POTENTE: Grazie al "sistema di scarico a getto" dei bagni Bot Flush, l'acqua per la pulizia della tazza e l'acqua per la pulizia del sifone passano attraverso canali separati ed entrano dai punti più vicini ed efficaci dell'area di scarico. Inoltre, l'acqua di lavaggio del vaso, che ruota nella stessa direzione, non rallenta a causa della collisione con altre masse d'acqua, come avviene nei bagni standard. Per questo motivo, i bagni Jet Flush hanno uno scarico più intenso rispetto agli altri.

RIMLESS KLOZET

Rimless (kanalsız) klozetler; tüm hazne yüzeyi açık olan kanalsız yapıyla klozet içindeki tüm noktalara ulaşarak kolay ve maksimum temizlik imkanı sağlar. Kirin gizlenebileceği veya birikebileceği köşeler olmaması sebebiyle standart klozetlere göre çok daha hijyeniktir.

RIMLESS TOILET

With an open-surface throughout the entire bowl, rimless toilets allow easy and maximum cleaning by reaching all points in the toilet bowl thanks to its rimless structure. It is much more hygienic compared to standard toilets as there are no places where dirt can hide or deposit.

VASO RIMLESS

Con una superficie aperta su tutta la tazza, i wc rimless permettono di pulire facilmente e al massimo, raggiungendo tutti i punti della tazza grazie alla struttura senza bordi. È molto più igienico rispetto ai wc standard perché non ci sono punti in cui lo sporco possa nascondersi o depositarsi.
